

SABARINATHAN KS

Software Engineer - Java Backend | Cloud-Native Microservices | Distributed Systems | CI/CD

India • +91 6382550740 • sabari.rishi33@gmail.com • linkedin.com/in/sabarinathan-k-s

EXECUTIVE SUMMARY

Java Backend Software Engineer with 3 years of experience designing and delivering scalable, cloud-deployed microservices for enterprise healthcare platforms at TriZetto. Owns full software development lifecycle from API design and implementation through QA, multi-environment deployment, and production monitoring across systems serving 100,000+ member records. Brings hands-on expertise in distributed RESTful architectures, SQL and NoSQL databases, and cloud CI/CD automation via Azure DevOps; recognized as Rookie of the Year 2025 for accelerating delivery on complex integration systems at scale.

CORE SKILLS

Languages & Frameworks	Java 8/11 (Advanced), Spring Boot, Spring MVC, Spring Data JPA, RESTful API Design
Cloud & Distributed	Cloud-Native Microservices, Azure DevOps, CI/CD Pipelines, Multi-Environment Deployment
Databases (SQL/NoSQL)	MySQL, PostgreSQL, MongoDB, Hibernate/JPA, Query Optimization, Data Modeling
Full SDLC Ownership	System Design, API Contracts, QA Coordination, Production Deployment, Performance Monitoring, Maven
Collaboration & Tools	Agile/Scrum, Git, GitHub, Swagger, Postman, IntelliJ IDEA, Cross-Functional Teamwork

PROFESSIONAL EXPERIENCE

Cognizant Technology Solution (TriZetto, Healthcare Domain)

Software Engineer - Java Backend

Chennai, India
09/2023 – Present

Sole backend engineer with full ownership of two enterprise cloud-deployed healthcare systems Core Integration Layer (CIL) and Engage Cost Estimator (ECE) from initial design through production deployment and ongoing monitoring. Systems support multi-client payer operations handling 100,000+ member records across distributed environments.

Key Achievements:

- Designed and developed a scalable, cloud-deployed microservices architecture using Java 11 and Spring Boot, delivering 15+ RESTful API endpoints that integrate healthcare cost estimation and member management portals across multi-tenant client environments.
- Architected and implemented external system integrations with Facets and QNXT payer platforms via secure REST contracts, reducing cross-system data exchange errors by 35% and ensuring reliable data consistency across distributed services.
- Built and maintained CI/CD pipelines on Azure DevOps automating build, test, and deployment workflows across 4 environments (INT, QA, PAT, PERF), reducing manual deployment effort by 40% and enabling zero-downtime production releases.
- Optimized JPA/Hibernate ORM mappings and SQL query performance against MySQL and PostgreSQL databases, improving data processing throughput by 25% for high-volume healthcare record operations.
- Took end-to-end ownership of feature delivery across full SDLC: requirement analysis, system design, implementation, QA coordination, and production monitoring across 10+ quarterly Agile releases.
- Resolved Maven dependency and build configuration issues across multi-environment releases, reducing build failure rate by 30% and unblocking cross-team deployment timelines.

Technologies: Java 11, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, MySQL, PostgreSQL, MongoDB, Maven, Azure DevOps, CI/CD, Git, Swagger, Postman, REST APIs, Microservices, Facets, QNXT

NOTABLE PROJECTS

Core Integration Layer (CIL) & Engage Cost Estimator (ECE)

Healthcare Payer Integration Platform | Cloud-Deployed, Multi-Environment

09/2023 – Present

Distributed backend platform integrating U.S. healthcare payer systems processing real-time eligibility, cost estimation, and member data for multi-client deployments. Designed for reliability and scalability across cloud and on-premises-connected infrastructure.

- Designed API contracts and built secure REST endpoints consumed by frontend portals and 3 external healthcare platforms, supporting real-time data exchange for 100,000+ member records.
- Implemented multi-environment deployment strategy across INT, QA, PAT, and PERF using Azure DevOps pipelines, enabling consistent release cadence with automated rollback on failure.
- Applied data-driven performance analysis to identify backend bottlenecks, profiled query execution plans, and optimized ORM configurations—resulting in 25% throughput improvement under peak load.

RECOGNITION

Rookie of the Year 2025 – TriZetto

2025

Awarded for exceptional backend engineering contributions and accelerated impact on complex enterprise healthcare cloud integration projects within the first 18 months of tenure.

EDUCATION

Bachelor of Technology (B.Tech) in Information Technology

Velammal College of Engineering and Technology, Anna University

2019 – 2023
